Dear Sir/Madam

THE ENVIRONMENTAL PERMITTING (ENGLAND AND WALES) REGULATIONS 2007 NOTIFICATION OF REVISIONS TO STANDARD RULES

**Permit reference: EPR/AP3692EH
Operator: Yorwaste Ltd
Facility: Seamer Carr Treatment and Transfer Plant, Dunslow Road, Eastfield,
Seamer, YO12 4QA**

We are writing to tell you about some changes we will be making to standard rules.

Our second standard rules consultation closed on November 14 2008. You can see full details of the consultation at: www.environment-agency.gov.uk/research/library/consultations/54311.aspx.

We sought views on new sets of standard rules for standard permits. We also consulted on proposed changes to existing standard rules for clinical and healthcare waste transfer and treatment, and to all existing sets of standard rules that contain capacity bands of <2,500, <5,000 and <25,000 tonnes per year.

We have decided to revise the standard rules for these activities so that there is one tonnage band of <75,000 tonnes per year. We will also be making minor administrative changes to the wording of all existing standard rules sets.

The removal of the lower tonnage bands will not result in changes to our charges. However, a number of changes for other reasons are under consideration. You can see details in a recent consultation (closed 5 December 2008) at: www.environment-agency.gov.uk/research/library/consultations/87451.aspx (Note that standard permits come under Tier 2 of the Environmental Permitting Charging Scheme).

Before we make changes to standard rules when we consider it necessary, we have

KEY ISSUES OF THE DECISION

Environmental risk

The risk of environmental harm from the site is low providing the activity is operated within the remit of the Standard Rules permit.

Operational techniques

The treatment and transfer treatment operation will be carried out in a dedicated building. The facility will transfer construction and demolition waste and store and shred municipal waste prior to its recycling or disposal.

Operator

The operator is a Private Limited company and therefore a legal entity as identified by Companies House.

Nicholas Smith is the nominated technically competence person and holds the Managing in treatment Operations - biodegradable waste level 4 – TMB4 and level 4 TMH Managing Treatment Hazardous waste.

Standard rules SR2008No3_75kte - household, commercial and industrial waste transfer station with treatment

Introductory note

This introductory note does not form part of these standard rules

When referred to in an environmental permit, these rules will allow the operator to operate a Household, Commercial and Industrial Waste Transfer Station with waste treatment at a specified location, provided that the permitted activities are not carried out within 500 metres of a European Site¹, Ramsar site or a Site of Special Scientific Interest (SSSI). Furthermore, specified waste cannot be treated outside a building within a specified Air Quality Management Area (AQMA)².

Permitted wastes are limited to non-hazardous wastes and do not include hazardous wastes such as asbestos. The total quantity of waste that can be accepted at a site under these rules must be less than 75,000 tonnes a year. With the exception of specified waste, all bulking, transfer or treatment of non-hazardous waste must be carried out inside a building. Wastes can be bulked up for disposal or recovery elsewhere and can also be treated by sorting, separation, screening, baling, shredding, crushing and compaction. These rules will not permit the burning of any wastes, either in the open, inside buildings or in any form of incinerator.

These rules do not allow any point source emission into surface waters or groundwater. However:

- Liquids may be discharged into a sewer subject to a consent issued by the local water company.
- Liquids may be taken off-site in a tanker for disposal or recovery.
- Clean surface water from roofs, or from areas of the site that are not being used in connection with storing and treating waste, may be discharged directly to surface waters, or to groundwater by seepage through the soil via a soakaway.

¹ A candidate or Special Area of Conservation (cSAC or SAC) and proposed or Special Protection Area (pSPA or SPA) in England and Wales.

² An Air Quality Management Area which has been designated due to concerns about particulate matter in the form of PM₁₀.

End of introductory note
